RF and IF Products

In Brief . . .

While Motorola is a worldwide leader in semiconductor products, there is not a category in which the selection is more diverse, or more complete, than in products designed for RF system applications. From MOS, bipolar power and signal transistors to integrated circuits, Motorola's RF components cover the entire spectrum from HF to microwave to personal communications. Yet, product expansion continues — not only to keep pace with the progressive needs of the industry, but to better serve the needs of designers for a reliable and comprehensive source of supply.

How to Use This Selector Guide

The RF Monolithic Integrated Circuits and the RF/IF Integrated Circuits products in this guide are divided into three major functional categories: RF Front End ICs, RF/IF Subsystem ICs and Frequency Synthesis. Each of these categories is further subdivided based on circuit functionality. This structure differentiates highly integrated subsystem ICs from fundamental circuit building blocks and discrete transistors.

The Small Signal Transistors, Medium Power Transistors, Power MOSFETs, Power Bipolar Transistors, Power Amplifier Modules and CATV Distribution Amplifiers are FIRST divided into major categories by power level. SECOND, within each category parts are listed by frequency band, except for small signal and medium power transistors, which are divided by application. Small signal transistor applications are low noise, linear amplifiers, switches, and oscillators. THIRD, within a frequency band, transistors are further grouped by operating voltage and, finally, output power.

To Replace Devices in an Existing Design

Call your local Motorola Sales Office or Distributor to determine Motorola's closest replacement device.

Applications Assistance

Applications assistance is only a phone call away — call the nearest Semiconductor Sales office or 1-800-521-6274.

Access Data On-Line!

Use the Motorola SPS World Marketing Internet Server to access Motorola Semiconductor Product data at <http://motorola.com/sps/> or <http://motorola.com/sps/rf/>. The SPS World Marketing Server provides you with instant access to data sheets, selector guide information, package outlines, on-line technical support and much more.

RF Front End ICs

Motorola's RF Front End integrated circuit devices provide an integrated solution for the personal communications market. These devices are available in plastic SO-8, SO-16, SOT-143, TSSOP-16, TSSOP-16EP, Micro-8, TSSOP-2EP, LQFP-48 or PFP-16 packages.

Evaluation Boards

Evaluation boards are available for RF Front End Integrated Circuits. For a complete list of currently available boards and ones in development for newly introduced product, please contact your local Motorola Distributor or Sales Office.

Motorola RF Discrete Transistors

Motorola offers the most extensive group of RF Discrete Transistors offered by any semiconductor manufacturer anywhere in the world today.

From Bipolar to FET, from Low Power to High Power, the user can choose from a variety of packages. They include plastic and ceramic that are microstrip circuit compatible or surface mountable. Many are designed for automated assembly equipment.

Major sub-headings are Small Signal, Medium Power, Power MOSFETs and Bipolar Transistors.

Motorola RF Small Signal Transistors

Motorola's broad line of RF Small Signal Transistors includes NPN Silicon Bipolar Transistors characterized for low noise amplifiers, mixers, oscillators, multipliers, non-saturated switches and low-power drivers.

These devices are available in a wide variety of package types. Most of these transistors are fully characterized with s-parameters.

RF Small Signal Transistor Gain Characteristics

Curve numbers apply to transistors listed in the subsequent tables.

Selection by Package

In small-signal RF applications, the package style is often determined by the end application or circuit construction technique. To aid the circuit designer in device selection, the Motorola broad range of RF small-signal amplifier transistors is organized by package. Devices for other applications such as oscillators or switches are shown in the appropriate preceding tables.

RF Small Signal Transistors Packages

Motorola RF Medium Power Transistors

RF Medium Power Transistors are used in portable transmitter applications and low voltage drivers for higher power devices. They can be used for analog cellular, GSM and the newer digital handheld cellular phones. GaAs, LDMOS and Bipolar devices are available. RF Medium Power Transistors are supplied in Motorola's high performance PLD line of surface mount power RF packages. Other applications include talkback pagers, wireless modems and LANs, cable modems, highspeed drivers and instrumentation.

CASE 449
(PLD-1)

Motorola RF High Power Transistors

RF Power MOSFETs

Motorola RF Power MOSFETs are constructed using a planar process to enhance manufacturing repeatability. They are *N-channel field effect transistors* with an oxide insulated gate which controls vertical current flow.

Compared with bipolar transistors, RF Power FETs exhibit higher gain, higher input impedance, enhanced thermal stability and lower noise. The FETs listed in this section are specified for operation in RF Power Amplifiers and are grouped by frequency range of operation and type of application. Arrangement within each group is first by order of voltage then by increasing output power.

RF Power Bipolar Transistors

Motorola's broad line of bipolar RF power transistors are characterized for operation in RF power amplifiers. Typical applications are in base stations, military and commercial landmobile, avionics and marine radio transmitters. Groupings are by frequency band and type of application. Within each group, the arrangement of devices is by major supply voltage rating, then in the order of increasing output power. All devices are NPN polarity except where otherwise noted.

Microwave Transistors

Table 4. L-Band Long Pulse Power

These products are designed for pulse power amplifier applications in the 960–1215 MHz frequency range. They are capable of handling up to 10 μ s pulses in long pulse trains resulting in up to a 50% duty cycle over a 3.5 millisecond interval. Overall duty cycle is limited to 25% maximum. The primary applications for devices of this type are military systems, specifically JTIDS and commercial systems, specifically Mode S. Package types are hermetic.

Motorola RF Amplifier Modules

Motorola's RF portfolio includes many hybrid designs optimized to perform either in narrowband base station transmitter applications, or in broadband linear amplifiers. Motorola modules feature two or more active transistors (LDMOS or Bipolar die technology) and their associated 50 ohm matching networks. Circuit substrate and metallization have been selected for optimum performance and reliability. For PA designers, hybrid modules offer the benefits of small and less complex system designs, in less time and at a lower overall cost.

Table of Contents

Motorola RF Amplifier Modules

Complete amplifiers with 50 ohm input and output impedances are available for all popular base station transmitter systems, including GSM and CDMA, covering frequencies from 800 MHz up to 2.2 GHz.

Base Stations

Designed for applications such as macrocell drivers and microcell output stage, these class AB amplifiers are ideal for GSM base station systems at 900, 1800 and 1900 MHz, with power requirements up to 16 watts.

Wideband Linear Amplifiers

Table 1. Standard 50 Ohm Linear Hybrids

This series of RF linear hybrid amplifiers have been optimized for wideband, 50 ohm applications. These amplifiers were designed for multi-purpose RF applications where linearity, dynamic range and wide bandwidth are of primary concern. Each amplifier is available in various package options. The MHL series utilizes a new case style that provides microstrip input and output connections.

MHW8292	29	128	+38	-56(40)	-60	-60	7.0	714Y/1

(40) Composite 2nd Order; V_{out} = +38 dBmV/ch

(46) To be introduced: a) 1Q99; b) 2Q99; c) 3Q99

★New Product

CATV Distribution: Forward Amplifiers (continued)

40–860 MHz Hybrids, V_{CC} = 24 Vdc, Class A (continued)

Device	Hybrid Gain (Nom.) dB	Channel Loading Capacity	Maximum Distortion Specifications				Noise Figure @ 860 MHz dB	Package/ Style
			Output Level	2nd Order Test	Composite Triple Beat	Cross Modulation FM = 55.25 MHz		
			dBmV	dB	dB	dB	128 CH	

Power Doubling Hybrids
